AL

AL Series Aluminum

- NorthClad® AL Series panels feature a pressure equalized rainscreen design. Combined with a superior flashing system to provide the composite look at a reasonable cost.
- No butyl tape or sealant required.
- Fully tested for air, water, structural, and pressure equalization performance per requirements of ASTM 283, ASTM 330, ASTM 331, and AAMA 508-7.
- Also available in galvanized steel, zinc, copper, stainless steel and other custom materials.

EF

EF Series Exposed Fastener

- NorthClad® CNC fabrication equipment ensures accurate dimensions and even allows engraving of patterns, logos, and signage directly into the panels.
- Choose from phenolic materials, aluminum composite, plate aluminum, and organic materials.
- Fully tested for air, water and structural performance per requirements of ASTM 283, ASTM 330, and ASTM 331.

DS

DS DESIGNER SERIES

- A designer's opportunity to create a unique facade.
- Taper ACM and AL Series panels or use varying depths to add a third dimension to a two-dimensional facade.
- Etch shapes across an entire elevations, or engrave building maps or logos directly into a building's facade panels.
- Create unique patterns using perforation, or perforate a photo.

ACM Series Aluminum Composite

- NorthClad® ACM Series panels feature a pressure equalized rainscreen design.
- Fully tested for air, water, structural, and pressure equalization performance per requirements of ASTM 283, ASTM 330, ASTM 331, and AAMA 508-7.
- The NorthClad® extrusion attachment system is engineered to provide superior wind uplift resistance and accommodate thermal expansion.

ACM

CL Series Column Covers

- Vertical height up to 16'-0" per segment; Diameter from 0'-12" to 8'-0" or more.
- Material options include: aluminum, stainless steel, aluminum composite, and other custom metals.
- CNC fabrication produces smooth, continuous curves with no segmented appearance.
- Available tapered, elliptical, and in custom shapes.
- Complete systems including butt plates for joints between vertical segments.

CL

NorthClad® rainscreen solutions

Zinc Series Options

- Available in AAMA 508-7 tested pressure-equalized rainscreen configuration.
- Zinc material provides superior natural corrosion resistance even in extreme environmental conditions.
- Available in various thicknesses and natural material compositions.
- Formed using precise CNC machinery for consistent shapes and tight tolerances.
