

The EF Series

Exposed Fastener Rainscreen System

Colors, gloss levels, and finish textures can be tuned to meet your specific project requirements. Fastener patterns and finishes can be adjusted to contrast or blend in. EF Series panels are not limited to perpendicular edges - curves and abstract shapes are possible.

- Extruded aluminum subgirts continuous at joints providing support and drainage
- Use stainless steel fasteners to create a unique look (fasteners available in a variety of colors)
- Integral prefinished aluminum flashing run the entire width of each panel providing additional protection from wind-driven rain at horizontal joints
- Panels available in a variety of rigid, weather resistant materials (multiple color, finish, material and texture options available)
- Panels are individually removable

STRONG. Don't take unnecessary risk by mounting your wall system to anything but high strength, extruded aluminum channel.

SMART. The NorthClad® EF Series is engineered to minimize routing and forming providing significant cost savings.

TESTED. The NorthClad® EF Series panel system is engineered and tested to meet stringent air, water, and structural performance requirements per ASTM 283, 330, and 331.

CAPABLE. Colors, gloss levels, and finish textures can be tuned to meet your specific project requirements. Fastener patterns and finishes can be adjusted to contrast or blend in.
