

CF

The CF Series Concealed Fastener

A concealed fastener panel system with factory or field cut edges, utilizing continuous horizontal structural extruded aluminum rail, panel mounted clips and formed closures, with a minimum system depth of 2" plus the thickness of the desired panels. For use with phenolic and other materials.

- Dry joint, rainscreen, wall panels

- Available for phenolic and other materials

- ½" joints horizontally and vertically

- Structural load tested, per ASTM E 330-2

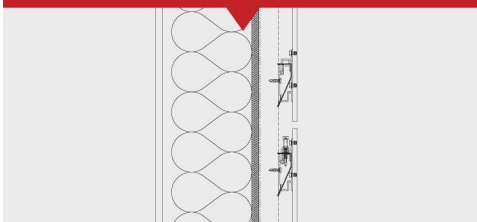

- System can be mounted on any waterproofed substrate with attachment to a suitable structure

- Standard system details for installation with building insulation either to the exterior of sheathing or within the stud cavity, available in either AutoCAD or PDF formats

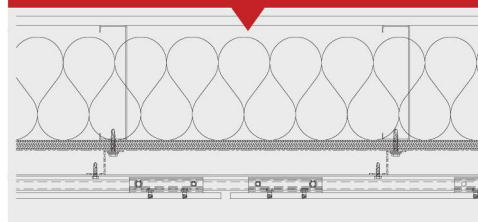

- Panels machined using a CNC gantry router
